Projects

Currently we have the following projects running :

- [LLL - Linux an Letzebuerger Lyceen](#) This project aims to promote GNU/Linux in the Luxembourg high schools (lycée).
- [swpat - No to software patents !](#) (obsolete) Join us in the fight for freedom. The EU is going to "harmonize" the patent system by enabling patents on software, which to us is nonsense. Do you want to know why ?
- [tux-banking](#) This project aims to test all the available e-banking solutions in Luxembourg about their GNU/Linux compatibility. Check out how to get Tux play with your money ;)
